ALEX PAVLIUK | sahapavliuk6@gmail.com | https://www.linkedin.com/in/alex-pavliuk-06b508336/

2+ years of Backend Developer experience, developing REST APIs and highly available microservices.

PROFESSIONAL EXPERIENCE

UpKeepDay | Backend Developer | Aug 2023 – Sep 2024

UpKeepDay is an all-in-one platform designed to simplify operations for tutors, enrichment schools, and after-school programs.

- Developed core features of product using Django and Django Rest Framework (DRF)
- Optimized slow-running queries by adding targeted indexes and eliminating redundant joins, reducing query time by ~10%
- Decreased API response time by 40% (300ms -> 120ms) adding Redis caching
- Built the end-to-end password reset flow using RabbitMQ for async email delivery; separately built background PDF report generation with Celery, removing report generation from the request/response cycle
- Integrated Stripe to support one-time tuition payments
- Wrote unit tests for every feature shipped, using unittest
- **Stack**: Django/DRF, PostgreSQL, Celery, Redis, RabbitMQ, unittest, AWS, Docker, git

HorandLTD | Backend Developer | Sep 2024 – Nov 2025

HorandLTD is a UK-based company providing virtual assistant and media services to clients across the United Kingdom, with a focus on IT, logistics, media, design, architecture, HR, and other professional fields.

- Developed backend with microservices architecture using FastAPI
- Worked with SQL using SQLAlchemy; managed migrations using alembic
- Used RabbitMQ for event base communication between microservices
- Implemented SAGA and Outbox patterns to guarantee consistency across 3 microservices without distributed transactions; added Circuit Breaker to prevent cascading failures during ActionBot service downtime
- Added retry logic with backoff for synchronous inter-service requests
- Wrote tests for every feature shipped, using pytest
- Orchestrated 3 microservices locally with Docker Compose
- Rewrote file upload handling with asyncio, cutting upload time by ~40%
- **Stack**: FastAPI, SQLAlchemy, alembic, asyncio, PostgreSQL, pytest, RabbitMQ, Docker/Docker Compose, Redis, git, CI/CD

PERSONAL PROJECTS

XiChess | https://github.com/linwexEU/chess

XiChess is a lite copy of chess.com.

- Reduced move-broadcast latency to 5-10ms by caching game state in Redis instead of hitting Postgres on every move
- **Stack**: FastAPI, SQLAlchemy, alembic, HTML/CSS/JS, PostgreSQL, Redis, smtp, websockets, RabbitMQ, git

Autoria-Parser | https://github.com/linwexEU/autoria-parser

- Built a scraper to collect listings from AutoRIA on a scheduled basis, with run times configurable via environment variables
- Used background tasks to run the scraper and database dump jobs on a schedule
- **Stack**: Playwright, bs4, SQLAlchemy, Alembic, PostgreSQL, Docker/Docker Compose
